Common Problems.

- Is your desk and office inundated with piles of paperwork ?
- Do you sometimes struggle to retrieve paperwork from your field based staff ?
- Does important paperwork get mislaid, lost or damaged ?
- Do you have to employ people just to file paperwork and update records ?
- Do you struggle to find that important document ?
- Do you have to provide further copies of documents and certificates to your clients ?
- Do you have to buy triplicate pads and paper just to make sure you have enough copies ?

Our Solution.

By using digital pen technology we can simply and cost effectively solve all of these issues.

We can provide a range of solutions from a single simple automated form to a suite of applications which will help you control and manage your complete business.

How it works.

All your companies forms and certificates are printed as a single paper copy.

As you print these forms, an electronic version is generated and stored on a remote document server.

These single forms are then completed by your staff in the field using the Digital Pen and then handed to your client.

The digital pen seamlessly transmits the pen strokes to your staffs mobile phone which then transparently transmits them back to the document server. The document server then recombines the pen strokes with the electronic copy of the document.

This document is then immediately available from your PC.
